

Eliminating Particle Emissions from Diesel Engines in Construction and underground

**Experience based on 7000
Trap-Retrofits in Switzerland**

Andreas Mayer / TTM

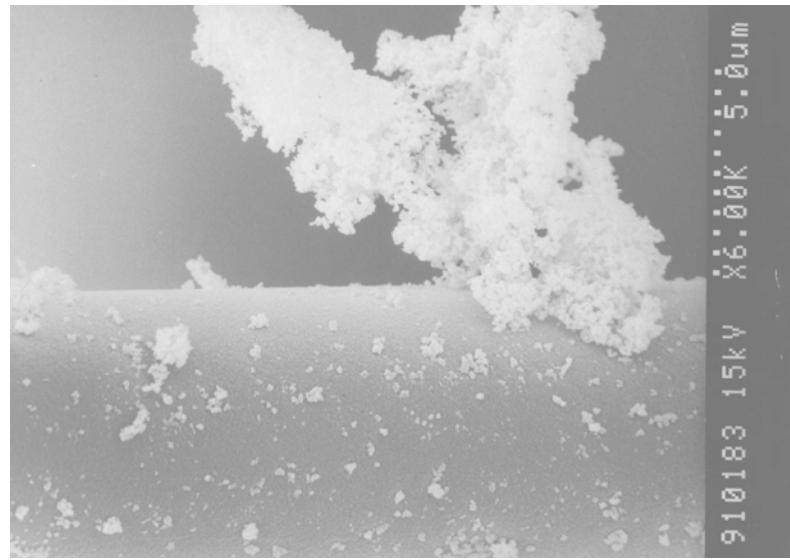

MDEC 2004

INTRODUCTION

- Ambient PM10 - Limit exceeded all over Switzerland
 - 60% Ultrafine Particles are emitted by Combustion Engines
 - Diesel Particles are Lung Penetrating
 - Diesel Particles are Carcinogenic
 - Mortality by Air Pollution is **5 x Traffic Accident Mortality**
- Minimization acc. to Best Available Technology BAT required
- Particle Traps are efficient and available = BAT

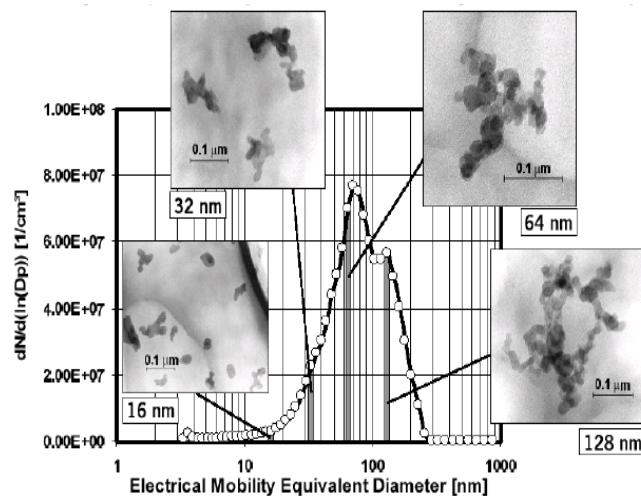

Diesel Particles are Nanosize < 300 nm
→ cell membrane penetrating

Swiss Regulations to enforce PFS- Introduction

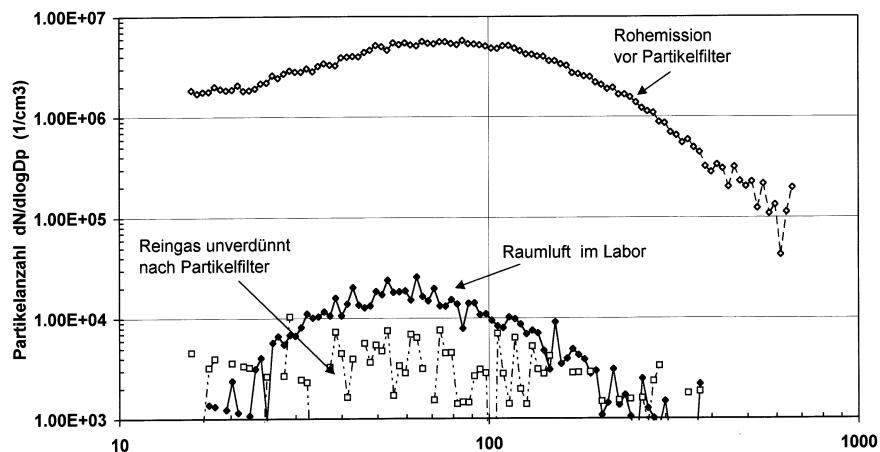

- 1990 (EJPD): Retrofit permitted under Condition:
 - no additional Noise Emission
 - no Formation of **secondary toxic Air Contaminants**
- 1994: SUVA: Diesel-Emissions DME **carcinogenic**
- 1998: LRV: Diesel-Soot **carcinogenic**
- 1998: Limit for steady state Engines < 5 mg/m³
- 2000: **SUVA: PFS mandatory** underground
- 2002: **BUWAL-BauRLL: PFS mandatory**
for general construction (B-type construction sites)
- 2003: ASTRA: only VERT approved PFS for Vehicles

Typischer Aufbau eines keramischen Zellenfilters Bild CORNING 1982

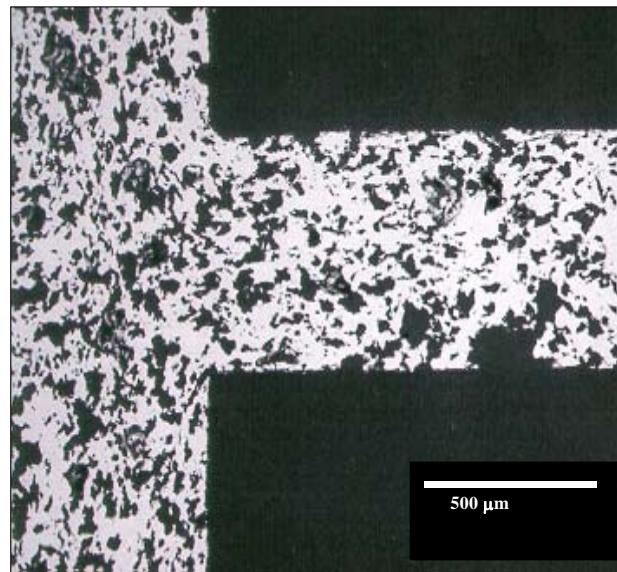

Cordierite und Silicon Carbide typical Ceramics for Particle Filters

11

Keramische / metallische Werkstoffe: porös, gasdurchlässig¹²
Porengröße um 0.01 mm / Partikel um 0.0001 mm

Many other DPF's in use

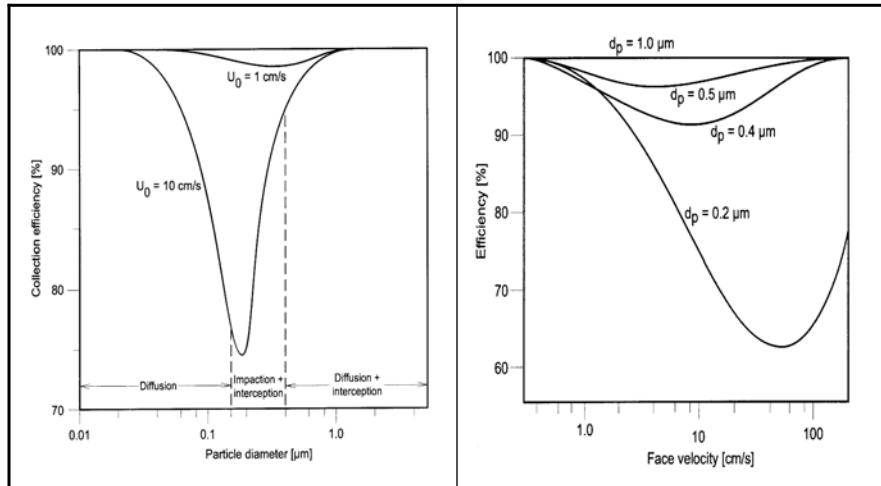

13

- metal sinter plates pleated
 - metal fiber felts
 - ceramic fiber felts and knits
 - ceramic and metal deep bed foams
 - wire mesh
 - papers
-
- some “open structures” appearing ??
 - electro and plasma systems not ready yet
 - cyclones and scrubbers disappearing

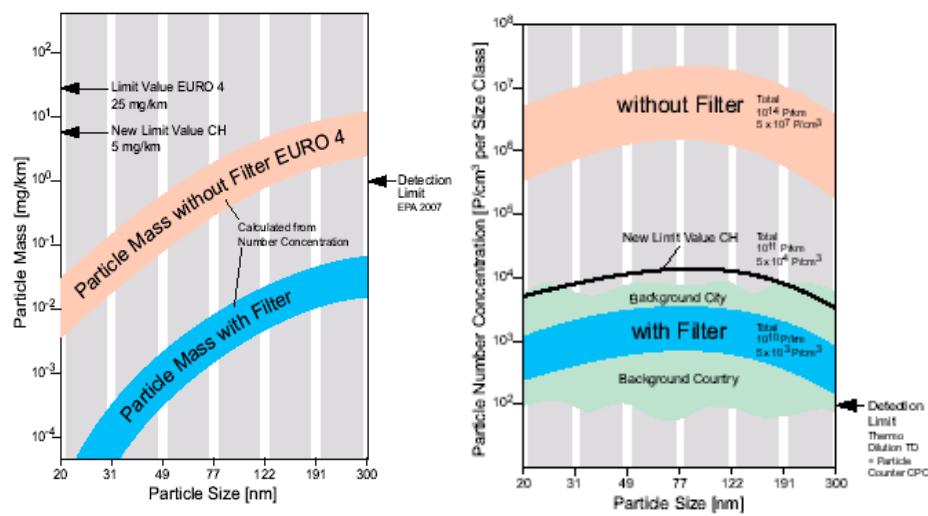

14

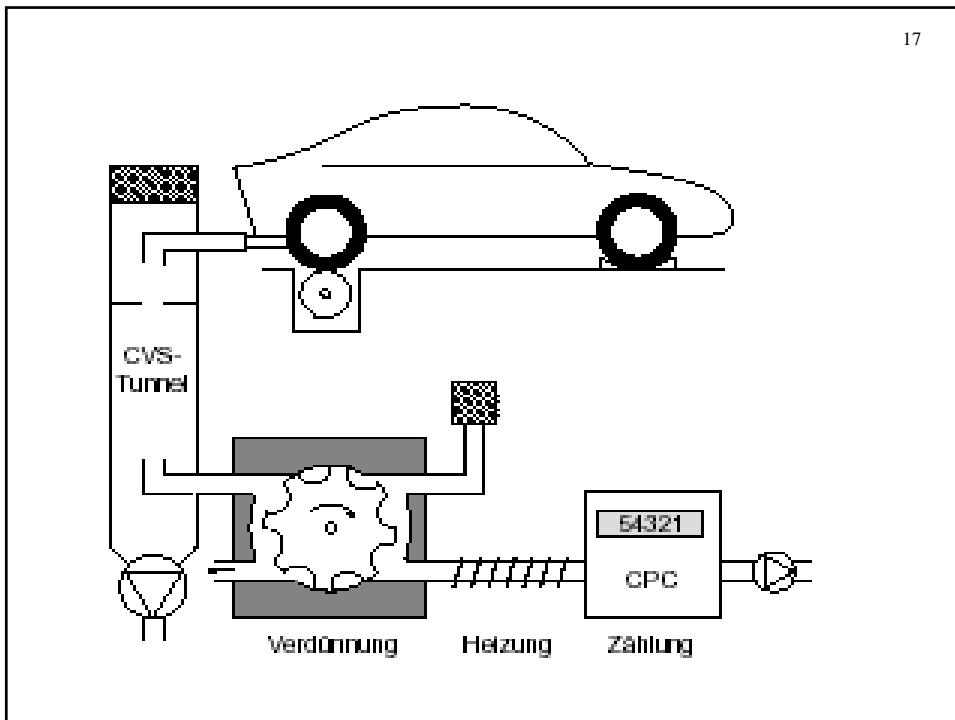

Quality Control Instruments and VERT-Standards

Weaknesses of Filters in the Size Range of Diesel Soot Particles

Only Number Count guarantees the Selection of high Quality Filters

18

VERT specifications for particle trap systems

	New	2000 op.hours
Filtration efficiency number count Number concentration* of solid particles in the size range 20-300 nm	> 95%	> 95%
Filtration efficiency EC mass EC mass concentration	> 90%	> 85%
Opacity during free acceleration	0.12 m ⁻¹	< 0.12 m ⁻¹
No increase of limited emissions CO, HC, NOx and PM		
No relevant increase of secondary toxic emissions		

VERT Filter Suitability Test

- **VFT1:** PFS new
- **VSET:** Secondary Emissions Test
(PAH, Nitro-PAH, PCDD/F and ...total > 150)
- **VFT2:** 2000 Operation Hours Field Test
- **VFT3:** Repetition of VFT1 after Field Test

VERT-Approval → BUWAL Filterlist

VERT-Approval is lost at a Failure Level > 5 % pa

VERT- tested PFS Status 8/2003

	Active Regeneration	Passive Regeneration	Filtration-Efficiency
DEUTZ	Full Flow Burner		98 old data
ECS-UNIKAT	Electr.Heating	Catalyt.Coating	99.99
HJS		CRT, FBC (Additives)	99.40
JOHNSON MATTHEY	Electr.Heating	CRT, FBC	99.50
HUSS	Electr.Heating Standstill-Burner		99.99
DCL	Electr.Heating Intake Throttling	FBC, Catalyt.Coating	99.99
ARVINMERITOR	Full Flow Burner		99.84
ENGELHARD		CSF	99.60
HUG	Full Flow Burner	Catalyt.Coating	98.60
INTECO		FBC	99.24

Zielstellung: DPF muss an die Stelle des Nachschalldämpfers

38

Influence on Noise

Hydraulikbagger A 914

- Motorleistung 112 kW

- PFS: CRT

- Schalleistungspiegel LwA:

Grenzwert: 106.0 dB(A)

mit Originalschalldämpfer: 102.1 dB(A)

Nach Umbau : 102.4 dB(A)

Drawbacks, Failures and Measures for Improvement

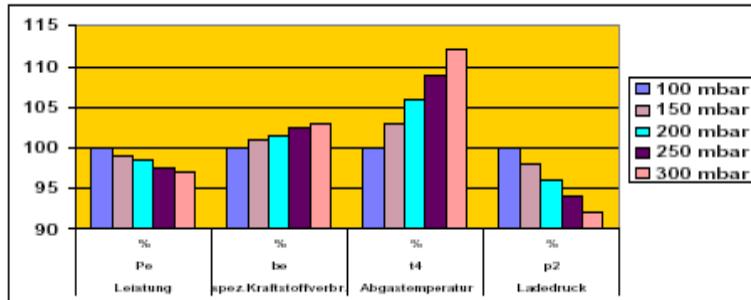

Cost

- **Retrofit Cost at low volume today**
 - 25 kW : 125 Fr/kW - 20 % of vehicle cost
 - 100 kW: 100 Fr/kW - 8 % of vehicle cost
 - > 250 kW: 80 Fr/kW - 5 % of vehicle cost
- **Cost Reduction expected**
 - Manufacturing Cost by 1/3 within 2 Years
 - Installation Cost will stay high
- **Cost of high volume DPF production**
 - LDV: 2 % of vehicle cost
 - HDV: 2 % of vehicle cost

Influence of Backpressure → Limit 200 mbar

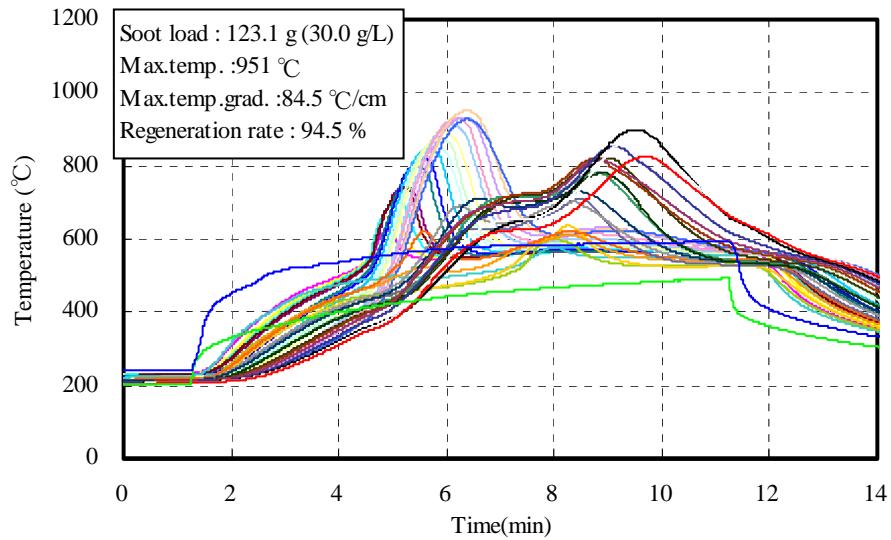

Einfluss des Abgasgegendruckes auf
Motorenkennwerte
(Nenndrehzahl und Vollast)

and Melting of the
Cordierite Material**
source Johnson Matthey

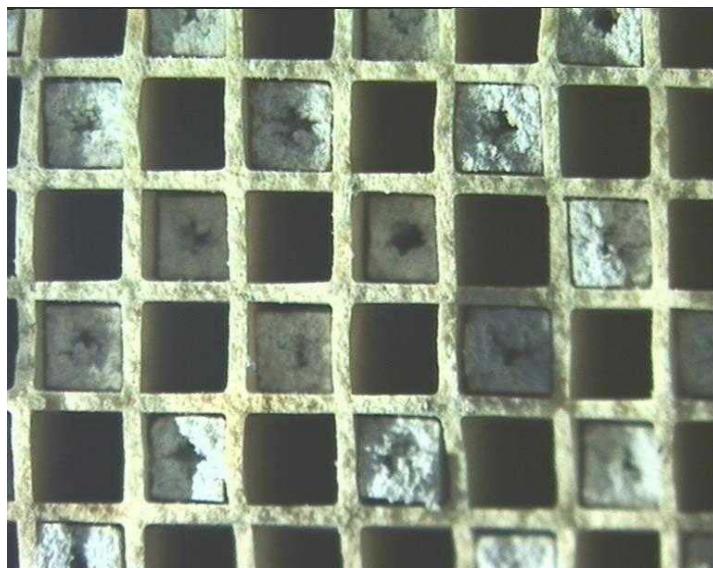

Reasons for Failures: Local Temperature Peaks during Regenerations⁴³ (source IBIDEN)

44

Ash Plugging of Filter Cells (source SHELL)

Reliability of PFS in Switzerland

- 1990: 230 Filters installed in Buses (DB/M&H-System)
1998: still 200 in Operation
- 2000: 2400 PFS in Operation, > 6% Failures pa
→ too many Failures → **Measures**
- 2003: **> 6500 PFS in Operation**
 - Failures < 2 % per year
 - PFS > 750'000 km with Trucks and Buses
 - PFS > 10'000 Bh with Construction Machines
 - PFS > 28'000 Bh on a Ferry Boat
- 2005: Construction Directive > 15'000 PFS expected
Failure Target: < 1% pa

Measures to improve Quality introduced Y 2000

- One Filter Family lost VERT-Approval
(disappears immediately after from Swiss Market)
- Introduction of the 2000-hrs Operation Test (VFT2)
- Introduction of electronic On-board-Control
and further mid-term measures
- Increase Use of active Filter-Systems
- Obligation for Engine Maintenance and Emission Control
- Access upstream of PFS for Emission Diagnosis
- Systematic PFS-Selection (CD available)

47

Character of Failures (1)

Most Failures immediately after Retrofit

- **Canning Failures** of the Ceramic Monolith
- **Material Failures** of the Filter Media
- **Cementing Failures** with segmented Filters
- **Mechanical Shock:** during Transport or Installation
- **Installation:** often insufficient Vibration Decoupling
- **Operation:** wrong Fuel – Sulfur Content too high
- **Application:** wrong System selected
- **High Lubrication Oil Consumption**

48

Character of Failures (2)

Failures rare after long Operation:

- Backpressure-Alarms not respected
- Ash-Cleaning unprofessional
- Engine Maintenance careless

Experience proves that VERT-Filters show no aging effects – loose no Filtration Quality

Outlook and Conclusions

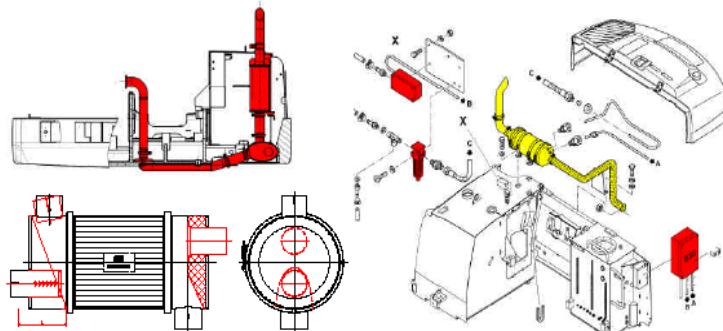

OEMs offer options

Tagung : „Minimierung der Partikelemissionen von Verbrennungsmotoren“

Haus der Technik

Planning for Switzerland

5

Retrofits

- Construction 25'000 (total 55'000) today: 5'300
 - Agriculture 30'000 (total 110'000)
 - Trucks 20'000 (total 65'000)
 - Buses 3'500 (total 5'500) today: 1'200

Incentives for new Vehicles

- LD-Vehicles Reduction of Import Tax (4%)
 - HD-Vehicles Reduction of Road Tax LSVA

Quality Criterion

- Ultrafine Particle Number Concentration

52

Classic DPF-Retrofit-Applications

- | | |
|-------------------------------|----------|
| • Sweden, environmental zones | 8'000.- |
| • Cities | |
| - Berlin Y 2000 | 1'000 |
| - Paris Y 2001 | 3'000 |
| - New York | 2'000 |
| - Zürich Y 2004 | 500 |
| - London Y 2004 | 6'000 |
| • Forklifts | > 40'000 |
| • Construction machines | 10'000 |
| • Mines | 4'000 |
| • Total worldwide | 100'000 |

Large DPF-Retrofit Plans

- USA Y 2006 ? 100'000
- Kalifornien Y 2008
all Diesel on-road und off-road 1'200'000
- Tokyo Y 2008 500'000
- Seoul Y 2010 220'000
- China: grüne Olympiade Y 2008
>100'000
- Santiago / Chile Y 2005 4'000
- Copenhagen Y 2006 20'000
- Germany: passenger cars starting Y 2006 ?

**Peugeot with FAP – 850'000 cars
successfully on european roads !**

55

Summary and Conclusions

- PFS are BAT to minimize high Health Risks of Machine Operators and Population → nanosize solid particle emissions from engines can be eliminated → Diesel = zero emission engine
- PFS can be applied on Diesel Engines of any Age, Design and Application
- PFS will become a Standard Component of Diesel Engines (like 3-way Cats for SI-Engine)

56

Thank You for your kind Attention
